

IN THE CLAIMS:

1. (Currently Amended) A television system, said system comprising
a broadcast data receiver for receiving data which is broadcast from a remote location and
which includes video, audio and auxiliary data, processing said data to generate video, audio and
auxiliary services via an on-screen display and speakers connected with the broadcast data receiver;
~~from said auxiliary data,~~ an electronic program guide which is generated from said auxiliary
data on screen to provide information and facilitate user selection of programs for viewing at that
instant or in the future; and
a storage means in the form of a hard disc memory provided as a part of the broadcast data
receiver in which video and/or audio data ~~may be~~ is downloaded and held in storage ~~stored~~ for
subsequent retrieval and display upon the selection of a program from the electronic program guide
and to which a portion of the stored video and/or audio data relates, wherein a plurality of portions
of video and/or audio data are stored on the hard disk, the stored portions of data having
identification data such that upon user selection to receive information on a program using the
electronic program guide the broadcast data receiver identifies the identification data for the selected
program and searches the hard disk for stored video and/or audio data with matching identification
data, and if found, processes the same for said display

2. (Previously Presented) A television system according to claim 1 wherein said retrieval and
display of said video and/or audio data from the storage means is in response to a user request for
further information with respect to a particular program displayed on said electronic program guide.

3. (Previously Presented) A television system according to claim 1 wherein a video and/or

1 audio clip or trailer for a particular program is generated from said data retrieved from storage and
2 shown to the user.

1 4. (Previously Presented) A television system according to claim 3 wherein the user has the
2 option, after or during viewing the clip or trailer, to select the program at that instant or in the future
3 via said electronic program guide.

1 5. (Canceled)

1 6. (Previously Presented) A television system according to claim 1 wherein said video and/or
2 audio data used to generate the clips or trailers in accordance with the invention, is downloaded at
3 designated time intervals and stored.

1 7. (Previously Presented) A television system according to claim 6 wherein said downloading
2 of said video and/or audio data occurs when said broadcast data receiver is less likely to be in use
3 for other functions.

1 8. (Cancel)

1 9. (Previously Presented) A television system according to claim 1 wherein said video data
2 being transmitted for the generation of clips and trailers is a low resolution.

1 10. (Previously Presented) A television system according to claim 1 wherein said data video data

1 being transmitted for the generation of the clips and trailers are shown in a portion of said display
2 screen.

1 11. (Previously Presented) A television system according to claim 1 wherein further auxiliary
2 information is generated via said data stored in the storage means for retrieval upon the selection of
3 a related program via said electronic program guide.

1 12. (Currently Amended) A television system, said system comprising:

a broadcast data receiver for receiving data broadcast from a remote location including video,
audio and auxiliary data for processing the data to generate video, audio and auxiliary services via
an on-screen display and speakers connected with the broadcast data receiver;

an electronic program guide generated from said auxiliary data to provide information and
facilitate user selection of programs for viewing at that instant or in the future; and

1 a storage means in the form of a hard disc memory provided as a part of the broadcast data
2 receiver in which a sufficient portion of the video and/or audio data for a particular clip or trailer
3 from each program in the electronic program guide is downloaded at a designated time when the
4 broadcast data receiver is not in use by a user and is held in the storage means ~~stored~~ for subsequent
5 retrieval and display, upon user selection of a program from the electronic program guide to which
6 a portion of the stored video and/or audio data relates, the broadcast data receiver refers to portions
7 of the downloaded video and/or audio data stored in the storage means to identify identification
8 means for the selected program and then searches for the appropriate identification means for a
9 portion of data in the storage means which matches the selected program and when found, a portion
10 of the data is processed to cause the clip or trailer for that particular program to be generated on the
11 display screen for viewing by a user.
